DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Broadway School, #109, is a stylistically neutral utilitarian brick structure which stands in the neighborhood of The Johns Hopkins Hospital. This two-story red brick building features a central tower capped by a pediment, two large chimneys with arched openings, and an entrance appendage on the south facade housing a stairwell. The school fronts on Broadway, which has a landscaped median strip with trees, sloping lawn, and space for sitting and walking. The building is surrounded by late 19th century brick rowhouses.

The front (west) facade is constructed of red stretched bond brick. It is six bays wide with a one bay wide entrance area set back from the front facade on the south. Two brick piers define the central tower, which is two bays wide with four nine-over-nine windows. The windows have stone sills and splayed brick lintels. A brick water table surmounts four bricked up basement window openings. Above the second story windows is a large carved stone displaying "Male and Female Primary School #5". A wooden dentilled pediment with brick tympanum surmounts bands of corbeled brick and header bond brick to end the tower facade. Two large chimneys, visible from the front facade, have arched openings on all sides, brick bands, and a corbeled brick cornice.

The building walls are styled in the fashion of the tower facade with identical windows, water table, bricked up basement openings and brick construction. They are defined by two slightly projecting corner piers. The walls are capped by brick corbeling, a band of header bond brick, and a metal rain gutter.

The brick appendage housing the front entrance and stairwell is one bay wide on the front facade and two bays wide on the side: it is three stories to the rest of the building's higher-ceilinged two. Both front and rear entrances are comprised of double doors surmounted by a single-light transom. A bracketed entrance hood above the front entrance is surmounted by a small window on the first floor and a four-over-four window on the second story. A wood cornice completes the facade. The side facade of the entrance appendage has identical four-over-four windows.

The north facade of the school is ten bays long. An outdoor stairway enclosed in corrugated metal is located here, as are two basketball play areas. This side is divided by two brick chimneys. The two rear windows are four-over-four, while the remaining windows are six-over-six with splayed brick lintels and stone sills. A rear entrance has a bracketed entrance hood identical to the front entrance. The south facade is divided by three projecting chimneys. It has a basement entrance. The rear section of both sides has a flat roof and simple wood cornice. The front portion of the side facade ends in a metal roof gutter and gabled roof.

The rear (east) facade is six bays wide. Windows are four-over-four with stone sills and splayed brick lintels. This facade fronts on a cobblestone alley.

The building interior features an "open plan" with classrooms separated by multi-paned glass partitions. The second floor has a central corridor with flanking classrooms which ends in a T-shape in the rear building section. This section houses two small rooms and stairways. The corridor on the first floor stops at the front four classrooms. Access to some of these classrooms is obtained only through other classrooms.

CONCRETE DATES 1876

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

The Broadway School was constructed in 1876. The building is significant as an "open plan" school with classes separated by glass partitions. This plan was developed in 1868 after a reformist movement sought to develop prototypical standards for school buildings. The "open plan" design was developed by J. J. Husband and was first used in School #126 in Sharp-Leadenhall. This plan allowed the principal to have a commanding view of all the classrooms. It also provided the flexibility to create larger classrooms by opening up glass partitions.

School #109 is proposed for re-use as twenty housing units. It is located near the Johns Hopkins Hospital, an area where there has been considerable interest in improving the community and attracting new groups to the neighborhood. The community has many nineteenth century houses, churches, and other institutional buildings.

SUMMARY OF SIGNIFICANCE

This school is significant as an "open plan" school with classes separated by glass partitions. Few of these schools survive today. Built in 1876, the school operated for nearly 100 years. The exterior architecture of the building is rather simple, blending into surrounding row housing.

**HISTORIC PRESERVATION CERTIFICATION
APPLICATION — PART 1**

(Pursuant to the Tax Reform Act of 1976)

Instructions: Applicant should read the instructions carefully before completing application. No Certification may be made unless a completed application form has been received (P.L. 94-455). Use typewriter or print clearly in dark ink to complete the application form. If additional space is needed to complete Part 1, use the reverse side or a separate plain sheet of paper clearly indicating the owner's name and mailing address. Part 1 of this application may be completed and sent to the appropriate State Historic Preservation Officer at any time during the year, and may be sent separately or with Part 2.

PART 1 EVALUATION OF SIGNIFICANCE1. NAME OF PROPERTY: The Broadway School (Public School # 109)Address of property: Street Broadway and Ashland AvenueCity Baltimore County --- State Maryland Zip Code ---Name of historic district in which property is located: ---

2. DESCRIPTION OF PHYSICAL APPEARANCE:

(see instructions for map and photograph requirements—use reverse side if necessary)

The Broadway School is a two-story red brick building featuring a central tower with pediment, two large chimneys with arched openings, and a side entrance appendage at the south corner of the front (west) facade. The front facade is constructed of red brick laid in all stretcher bond, six bays wide with

3. STATEMENT OF SIGNIFICANCE:

(use reverse side if necessary)

The Broadway School was constructed in 1876 and is significant as an example of the "open plan" school with classrooms separated only by glass partitions. This plan was developed in 1868 after a reformist movement sought to develop prototypical standards for public

2. Continued

a one bay wide entrance pavilion recessed from the front facade at the south corner. The projecting central tower is defined by brick engaged pilasters at the corners, is two bays wide with 9/9 wood sash at both levels. A large limestone tablet over the pair of second story windows is inscribed "Male and Female Primary School # 5". The tower is finished with a dentilled wood pediment with brick tympanum resting on a cornice and entablature of corbelled bricks and two rows of headers. Two large chimneys, visible from the front facade, have arched openings on all four sides, brick banding above and below the openings, and corbelled brick at the cap. The walls flanking the projecting tower pavilion have identical paired windows, water table and brick construction, and are defined by similar engaged brick pilasters at the corners, brick corbelling and double row of headers at the roof line. The roof over the main body of the school is a low hip.

The brick entrance pavilion appended to the south end of the west facade and slightly recessed, is one bay wide by two bays deep. Entrances at the front (west) and rear (east) are served by double doors with single light transoms. A bracketed entrance hood above the west entrance has a curious two light horizontal window above it, with a 4/4 double hung wood sash at the second floor. A molded wood cornice surrounds the entrance pavilion at the eaves line.

The north side facade is ten bays deep, divided into three sections by brick chimneys. The first two sections are three bays deep, with 9/9 sash in flat splayed brick arches. The roof over these two sections is gable-hip, visible from the front facade. The rear section of the side elevations has a flat roof and 4/4 sash, with an entrance with bracketed hood in the last bay. The south side elevation is divided by three brick chimneys and has an entrance to the cellar. The rear elevation is six bays wide. Based on the change in roof form and window design, it is presumed that the two bay rear part of the school is a later addition, but undated.

The interior features an open plan, with the fourteen classrooms separated by multi-paned glass partitions. The second floor has a center hall with flanking classrooms, terminating in the rear section in a "T". The hall on the first floor ends at the start of the rear two bay deep section, further evidence of the probable later date for this part of the school. The ceilings are plaster, floors wood, partitions paneled below the glass, and most doors panelled with multi-paned lights.

3. Continued

school buildings. The "open plan" design was developed by J.J. Husband and was first used in Baltimore at the Sharp Leadenhall School #126. This plan allowed the principal a commanding view of all the classrooms and provided greater flexibility in creating larger classrooms by simply opening the glass partitions.
